Process / flow

Source

- ../source/tools/AIAssistant/AIAuditLog.h
- ../source/tools/AIAssistant/AIAuditLog.cpp
- ../source/tools/AIAssistant/AISecretStore.h
- ../source/tools/AIAssistant/AISecretStore.cpp
- ../source/applications/gui/ai_assistant/AIAssistantWindow.cpp

Purpose

- Show how API keys and audit records move
- through the current local-only tooling.

Required content

- in-memory key entry
- optional secret-tool keyring save/load/remove
- masked key display in the GUI
- append-only JSONL audit log
- CSV export path

Accessibility

- A security-and-observability diagram that
- separates key handling from audit logging.

Validation

- The diagram must match the current GUI callbacks and audit file format.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
