

Current permission model and readiness gates for the AI assistant.

fig:ai-permission-model | figure

Generated from FIGURE-SPEC comments

Source

- ../source/tools/AIAssistant/AIAssistant_if.h
- ../source/tools/AIAssistant/AIAssistantDefaultImpl.h
- ../source/tools/AIAssistant/AIAssistantDefaultImpl.cpp
- ../source/applications/gui/ai_assistant/AIAssistantWindow.cpp

Purpose

- Show the current deny-by-default
- permission model and readiness gates.

Required content

- allowNetworkAccess
- allowModelMutation
- allowSimulationExecution
- allowFileSystemWrites
- sandboxEnabled
- dryRun
- provider/model/key/baseUrl readiness checks

Accessibility

- A permission and readiness diagram that
- shows which operations are blocked until
- explicitly enabled.

Validation

- Every gate must match the current backend code and GUI configuration flow.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
