- source/plugins/components/ModalModel/CellularAutomata/LocalRule_HppLatticeGas.h

Purpose

- Show the CA component facade, the
- lattice/neighborhood/state-set layers,

Required content

- component facade and configuration enums
- lattice
- neighborhood
- state set
- local rule
- classic update loop
- 1D timed variant

Exclusions

- do not imply that every local rule family has the same maturity
- do not imply that the HPP rule or Game of Life are presented as the same abstraction

Accessibility

- A grid-and-rule diagram that shows how a
- cell neighborhood evolves to the next

The source block remains the authoritative specification. The rendered asset is a compact visual summary.
