- source/tools/Continuous/RungeKutta4OdeSolver.h

Purpose

- Show the solver step sequence and the way
- continuous advancement is

Required content

- solver creation
- repeated step advancement
- state capture after each event or step
- comparison against an exact or reference trajectory where available

Exclusions

- do not imply adaptive-step error control when the chosen solver is fixed-step
- do not imply a proof of global scientific validity

Accessibility

- A timeline showing that the solver
- advances state incrementally while the

Validation

- The figure must agree with the trace/demo programs already present in the tree.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
