

Current configure, build, and test pipeline.

fig:dev-build-pipeline | figure

Generated from FIGURE-SPEC comments

Process / flow

Source

- ../README.md
- ../docs/ai_assistants/runbooks/LOCAL_AGENT.md
- ../CMakePresets.json
- ../source/tests/CMakeLists.txt

Purpose

- Show the current configure -> build ->
- test flow for the main preset families.

Required content

- repository baseline and version checks
- configure step with a named preset
- build step with the matching build preset
- test step when the preset family has a test preset

Accessibility

- A pipeline diagram that explains how a
- developer moves from toolchain check to
- configure, build, and validation.

Validation

- The command names and arrows must match the current presets and runbook guidance.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
