Generated from FIGURE-SPEC comments

Tree / family map

Source

- ../README.md
- ../CMakePresets.json
- ../source/tests/CMakeLists.txt

Purpose

- Show how a developer chooses between test,
- shell, worker, GUI, model-specific, and
- sanitizer builds.

Required content

- root toolchain check
- branch for tests
- branch for shell/worker/GUI/model-specific apps
- branch for focused sanitizer execution

Accessibility

- A decision tree that points the reader to
- the right preset and validation path.

Validation

- The branch names and target names must match the current repository surface.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
