Source

- source/parser/Genesys++-driver.cpp
- source/parser/parserBisonFlex/bisonparser.yy
- source/tests/unit/test_parser_expressions.cpp

Purpose

- Show the current error path from scanner
- failure or invalid function parameters to
- the driver error state.

Required content

- illegal character branch
- unknown literal branch
- invalid probability-parameter branch
- thrown versus non-throwing parse path
- stored error message

Accessibility

- A failure-flow diagram that helps the
- reader distinguish syntax errors from
- recoverable semantic errors.

Validation

- The diagram must match the current driver error handling and the tested invalid distribution cases.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
