

Expression precedence and grouping in the current grammar.

fig:expression-precedence-map | figure

Generated from FIGURE-SPEC comments

Source

- source/parser/parserBisonFlex/bisonparser.yy
- source/tests/unit/test_parser_expressions.cpp

Purpose

- Show the precedence layers used by the
- current expression grammar.

Required content

- literals and parentheses
- unary plus and minus
- power as a right-associative layer
- multiplicative, additive, relational, and logical layers
- command forms shown as side branches, not arithmetic operators

Accessibility

- A layered precedence chart that explains
- how the parser groups expressions before
- evaluation.

Validation

- The chart must match the grammar nonterminals and the tested precedence behavior.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
