Process / flow

Source

- ../source/plugins/data/BiochemicalSimulation/MetabolicNetwork.h
- ../source/plugins/data/BiochemicalSimulation/MetabolicReaction.h
- ../source/plugins/components/BiochemicalSimulation/MetabolicFluxBalance.h
- ../source/plugins/components/WholeCellModeling/MetabolicStateProjectionComponent.h

Purpose

- Show the FBA-style path from reaction
- membership to flux balance and projection.

Required content

- metabolic reaction membership and bounds
- objective selection
- flux-balance solve
- projection into pathway activity or pools

Accessibility

- A pipeline diagram from a metabolic
- network through FBA to projected state
- updates.

Validation

- The diagram must reflect the current backend behavior in the whole-cell MVPs and tests.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
