

Comparison between the baseline and the stricter branch threshold.

fig:first-model-comparison | figure

Generated from FIGURE-SPEC comments

Source

- models/AirportSecurityExample.gen
- the saved modified copy created during the tutorial
- source/kernel/simulator/model/ModelSimulation.cpp

Purpose

- Show the before/after comparison between
- the baseline run and the stricter decision
- threshold.

Required content

- baseline and modified report summary side by side, or a clearly comparable pair
- the changed decision threshold in the edited model
- a visible difference in branch counts or branch proportions

Accessibility

- A comparison figure that makes the single
- parameter change and its effect obvious.

Validation

- The comparison must show a real difference caused by the edited threshold, not by a different mode

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
