Process / flow

Source

- ../source/applications/gui/genesys/mainwindow_controller.cpp
- ../source/applications/gui/genesys/mainwindow_simulator.cpp
- ../source/applications/gui/genesys/controllers/SimulationController.h
- ../source/applications/gui/genesys/controllers/SimulationCommandController.h
- ../source/applications/gui/genesys/controllers/SimulationEventController.h
- ../source/applications/gui/genesys/controllers/TraceConsoleController.h
- ../source/applications/gui/genesys/animations/AnimationTransition.h

Purpose

- Show how the start/step/pause/resume/stop
- actions reach the simulator and then
- return UI events.

Required content

- the readiness guard
- the command controller
- the simulator/model simulation call
- the event controller and trace bridge

Accessibility

- A command-and-response sequence that shows
- the GUI and simulator halves of a run.

Validation

- Every action and callback must exist in the current source tree.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
