Process / flow

Source

- ../source/kernel/simulator/model/ModelDataDefinition.h
- ../source/kernel/simulator/model/ModelDataDefinition.cpp
- ../source/kernel/simulator/model/ModelDataDefinitionAssociations.h
- ../source/kernel/simulator/model/ModelDataDefinitionAssociations.cpp
- ../source/kernel/simulator/model/ModelComponent.h
- ../source/kernel/simulator/model/ModelComponent.cpp

Purpose

- Show the constructor-to-validation flow
- for a new definition or component
- instance.

Required content

- plugin or direct constructor entry
- manager registration
- standard control creation
- internal/attached data hooks
- validation and init-between-replications steps

Accessibility

- A flow diagram that explains where
- identity, controls, validation, and helper
- data are established.

Validation

- The diagram must match the actual helper methods and call order used by the current implementation.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
