Source

- source/applications/gui/genesys/graphics/ModelGraphicsScene.h
- source/applications/gui/genesys/graphics/ModelGraphicsView.h
- source/applications/gui/genesys/controllers/EditCommandController.cpp
- source/applications/gui/genesys/mainwindow.ui

Purpose

- Show how one model component is connected
- to another in the graphical scene.

Required content

- two or more components with a visible connection path
- source and destination ports or connection handles
- the current scene state after the connection is made

Accessibility

- A close-up that makes the direction and
- ownership of the connection easy to
- understand.

Validation

- The connection must be a real scene link between live components, not just a diagram sketch.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
