Process / flow

Source

- models/AirportSecurityExample.gen
- source/applications/gui/genesys/services/ModelLanguageSynchronizer.h
- source/applications/gui/genesys/services/GraphicalModelSerializer.h

Purpose

- Show the practical reading flow from GUI
- model to text file and back again.

Required content

- a graphical model view
- a corresponding model-language excerpt
- arrows or annotations showing round-trip synchronization

Accessibility

- A simple explanatory diagram that helps
- the reader map visual objects to text
- lines and back.

Validation

- The diagram must describe the current synchronization path, not a hypothetical one.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
