Tree / family map

Source

- source/applications/modelSpecific/arenaExamples/AirportSecurityExample.cpp
- models/AirportSecurityExample.gen
- build/modelspecific-validation/logs/arenaExamples__AirportSecurityExample.run.log

Purpose

- Show the generated model and the simple
- passenger screening workflow.

Required content

- the create/process/decide/dispose chain
- the saved .gen output artifact
- the 12 hour / 2 replication / 0.5 hour warm-up configuration

Accessibility

- A compact workflow diagram that shows a
- single screening path with a pass/fail
- branch.

Validation

- The structure must match the source file and the current reproduced run log.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
