

Current artifact flow for Debian packaging.

fig:packaging-artifact-flow | figure

Generated from FIGURE-SPEC comments

Process / flow

Source

- ../github/workflows/genesys-debian-package.yml
- ../scripts/run-debian-package-workflow.sh
- ../debian/control
- ../debian/genesys-gui.install
- ../debian/genesys-web.install

Purpose

- Show the relationship between the Debian
- source package, the binary

Required content

- source package
- binary packages
- diagnostics artifacts
- package artifacts
- upload destinations

Accessibility

- A package artifact map that separates
- source, build outputs, and diagnostics.

Validation

- The package names and artifact names must match the current repository.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
