Generated from FIGURE-SPEC comments

Process / flow

Source

- source/parser/parserBisonFlex/lexerparser.ll
- source/parser/parserBisonFlex/bisonparser.yy
- source/parser/Genesys++-driver.cpp

Purpose

- Show how illegal tokens, grammar failures,
- and driver exceptions become reported
- parser errors.

Required content

- illegal token branch
- parse_str/parse_file exception handling
- error message storage
- result reset to -1
- warning path for non-numeric simulation symbols

Accessibility

- A flow diagram that makes the current
- error-reporting behavior easy to
- distinguish from successful evaluation.

Validation

- The diagram must match the actual catch blocks and error-message handling in the driver.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
