

Current parser generation and rebuild flow.

fig:parser-generation-flow | figure

Generated from FIGURE-SPEC comments

Process / flow

Source

- source/parser/CMakeLists.txt
- source/parser/parserBisonFlex/bisonparser.yy
- source/parser/parserBisonFlex/lexerparser.ll
- source/parser/GenesysParser.cpp
- source/parser/GenesysParser.h
- source/parser/Genesys++-scanner.cpp

Purpose

- Show how the committed generated files and
- the optional regeneration path are
- related.

Required content

- Bison/Flex source files
- optional regeneration toggle in CMake
- generated parser headers and sources
- static library assembly
- note that ParserManager generation is still a stub

Accessibility

- A build-flow diagram that distinguishes
- committed generated code from optional
- regeneration.

Validation

- The diagram must match the current CMake option, generated artifacts, and current stubbed genera

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
