

# Current parser pipeline from source text to value.

**Source**

- source/parser/parserBisonFlex/lexerparser.ll
- source/parser/parserBisonFlex/bisonparser.yy
- source/parser/Genesys++-driver.h
- source/parser/Genesys++-driver.cpp

**Purpose**

- Show the current path from source text
- through tokens and grammar to the final
- value or error.

**Required content**

- source text input
- scanner/token layer
- grammar reductions
- driver state and returned value
- explicit error branch

**Accessibility**

- A pipeline diagram that lets the reader
- follow one expression from characters to
- evaluated result.

**Validation**

- The diagram must match the current scanner, grammar, and driver responsibilities.

The source block remains the authoritative specification.  
The rendered asset is a compact visual summary.
