

Current repository layers and their responsibilities.

fig:repo-layer-map | figure

Generated from FIGURE-SPEC comments

Source

- ../docs/ai_assistants/ARCHITECTURE.md
- ../README.md
- ../CMakeLists.txt
- ../source/kernel/*
- ../source/parser/*
- ../source/plugins/*
- ../source/applications/*
- ../source/tools/*

Purpose

- Show the durable architectural layers and
- how source families map onto them.

Required content

- kernel as the foundation
- parser and plugins as language/extensibility layers
- applications and tools on top
- tests as validation
- non-source roots as support material

Accessibility

- A layer diagram that explains which parts
- of the tree are structural and which are
- support or content.

Validation

- The layer names must match current repository boundaries and the diagram must not imply forbidden

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
