

Current target graph derived from the live CMake files.

fig:repo-target-graph | figure

Generated from FIGURE-SPEC comments

Source

- ../CMakeLists.txt
- ../CMakePresets.json
- ../source/kernel/*/CMakeLists.txt
- ../source/plugins/*/CMakeLists.txt
- ../source/parser/CMakeLists.txt
- ../source/applications/*/CMakeLists.txt
- ../source/tests/CMakeLists.txt
- ../source/tools/CMakeLists.txt

Purpose

- Show the actual target families and their
- link/build dependencies.

Required content

- static core libraries
- application executables
- test executables and aggregate targets
- compatibility aliases and custom targets where they matter

Accessibility

- A dependency graph that helps the reader
- distinguish libraries, executables,
- aliases, and aggregate targets.

Validation

- Every node must correspond to a real current target or alias, and every edge must follow a real target

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
