Tree / family map

Current repository tree...

top-level roots

source subtree...

docs, models,...

Source

- ../README.md
- ../docs/ai_assistants/ARCHITECTURE.md
- ../CMakeLists.txt
- filesystem tree under ../

Purpose

- Show the current top-level repository
- layout and the major source/support roots.

Required content

- top-level roots
- source subtree families
- docs, models, packaging, scripts, debian

Accessibility

- A compact repository map that helps the
- reader orient before drilling into CMake
- or source trees.

Validation

- Every directory label must exist in the current checkout and the diagram must not include generated

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
