Process / flow

Source

- source/applications/gui/genesys/mainwindow.cpp
- source/kernel/simulator/model/ModelSimulation.h
- source/kernel/simulator/model/ModelSimulation.cpp

Purpose

- Show the effective state machine formed by
- running, paused, resumed, stepped, and
- stopped states.

Required content

- the idle/ready state
- the running state
- the paused state
- the ended/stopped state
- the triggering commands and breakpoint transition

Accessibility

- A small transition diagram that maps the
- GUI buttons to kernel state changes.

Validation

- The diagram must reflect the boolean state checks and transitions in the code.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
