

Current Worker API surface and authentication boundary.

fig:worker-architecture-api-surface | figure

Generated from FIGURE-SPEC comments

Source

- ../source/applications/worker/api/ApiRouter.cpp
- ../source/applications/worker/service/SimulatorSessionService.h
- ../source/applications/worker/service/SimulatorSessionService.cpp
- ../source/applications/worker/README.md

Purpose

- Show the current route groups and which
- ones require bearer authentication.

Required content

- public discovery routes
- session-scoped simulator routes
- model persistence and import routes
- worker job routes
- auth requirements per group

Accessibility

- A route map that helps users and
- integrators see which calls are public and
- which are token-scoped.

Validation

- Every route in the diagram must match the current ApiRouter implementation and README contract

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
