Process / flow

Source

- ../source/applications/worker/http/SimpleHttpServer.h
- ../source/applications/worker/http/SimpleHttpServer.cpp
- ../source/applications/worker/api/ApiRouter.h
- ../source/applications/worker/api/ApiRouter.cpp

Purpose

- Show the request path from socket read to
- router dispatch and JSON response.

Required content

- socket accept/read/write loop
- bounded request assembly
- parseRequest and handler callback
- router dispatch to route groups
- JSON error mapping for transport failures

Accessibility

- A transport-to-routing flow diagram that
- clarifies where HTTP parsing stops and API
- handling begins.

Validation

- The diagram must match the current read, timeout, and response behavior in the server code.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
