

Current Worker deployment and recovery boundary.

fig:worker-architecture-security-boundary | figure

Generated from FIGURE-SPEC comments

Source

- ../README.md
- ../docs/ai_assistants/ARCHITECTURE.md
- ../source/applications/worker/README.md
- ../source/applications/worker/http/SimpleHttpServer.cpp
- ../source/applications/worker/service/WebWorkerRuntime.cpp

Purpose

- Show the current local/private deployment
- boundary, the transport limits, and the
- runtime recovery hooks.

Required content

- local/private deployment zone
- INADDR_ANY binding on a selected port
- 1 MiB request limit and 5 second timeout guardrails
- error mapping to 400/401/404/409/413/500
- bounded runtime event/error history

Accessibility

- A boundary diagram that makes the
- non-production security posture explicit.

Validation

- The diagram must match the current README, architecture guidance, and server implementation.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
