Process / flow

Source

- ../source/tools/AIAssistant/AIConversationService.cpp
- ../source/tools/AIAssistant/HttpProviderClientBase.cpp
- ../source/tools/AIAssistant/OpenAIProviderClientImpl.cpp
- ../source/tools/AIAssistant/AnthropicProviderClientImpl.cpp
- ../source/tools/AIAssistant/LocalProviderClientImpl.cpp
- ../source/tools/AIAssistant/AIAssistantDefaultImpl.cpp

Purpose

- Show the current request path from prompt
- and history to provider response.

Required content

- prompt / history / system instructions
- AIConversationService
- provider client selection
- curl-based transport with temp files
- provider-specific response parsing
- response metadata and diagnostics

Accessibility

- A pipeline diagram that clarifies how
- assistant requests are turned into
- provider calls and responses.

Validation

- Every stage must correspond to a real method or class in the current implementation.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
