Process / flow

Source

- ../source/tools/AIAssistant/AIAssistantDefaultImpl.cpp
- ../source/tools/AIAssistant/AIAssistantDefaultImpl.h
- ../source/applications/gui/ai_assistant/AIAssistantWindow.cpp

Purpose

- Show how sandbox and dry-run change the
- effect of the AI workflow.

Required content

- buildModel temporary model clear and temp-file write path
- configureSimulation extraction/application path
- runSimulation synchronous call path
- collectResults rendering path
- dry-run branches that preview instead of mutate
- sandbox branch that clears the model before buildModel

Accessibility

- A workflow diagram that shows which
- operations mutate the model and which are
- preview-only.

Validation

- The diagram must match the current conditional branches in the backend.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
