

Composition roots for the current application processes.

fig:application-architecture-composition-roots | figure

Generated from FIGURE-SPEC comments

Process / flow

Source

- ../source/applications/shell/main.cpp
- ../source/applications/worker/main.cpp
- ../source/applications/worker/BaseGenesysWebApplication.cpp
- ../source/applications/gui/genesys/main.cpp
- ../source/applications/modelSpecific/main.cpp
- ../source/tools/main.cpp

Purpose

- Show how each executable reaches its own
- runtime object graph.

Required content

- shell bootstrap to terminal app
- worker bootstrap to web runtime and HTTP server stack
- main GUI bootstrap to QApplication and MainWindow
- model-specific build-time selection bootstrap
- tools CLI command dispatch

Accessibility

- A startup diagram that shows the
- composition root for each process.

Validation

- Every bootstrap step must follow the current entry-point code.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
