- ../source/applications/gui/ai_assistant/CMakeLists.txt
- ../source/applications/modelSpecific/CMakeLists.txt
- ../source/tools/CMakeLists.txt
- ... (1 more)

Purpose

- Show the current application family tree
- and which executable names belong to each
- family.

Required content

- the shell, worker, main GUI, standalone Qt frontends, model-specific route, and optional tools CLI
- the current executable names and aliases
- the intentional absence of Do Experiments

Accessibility

- A family map that helps the reader choose
- the right executable without scanning
- build files.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
