Generated from FIGURE-SPEC comments

Source

- ../CMakeLists.txt
- ../source/applications/worker/CMakeLists.txt
- ../source/applications/gui/genesys/CMakeLists.txt
- ../source/applications/gui/httpworker/CMakeLists.txt
- ../source/applications/gui/dataanalyser/CMakeLists.txt
- ../source/applications/gui/optimizer/CMakeLists.txt
- ../source/applications/gui/ai_assistant/CMakeLists.txt
- ../source/tools/CMakeLists.txt

Purpose

- Show the shared static libraries and the
- main application processes that consume
- them.

Required content

- the simulator backbone libraries
- worker_core and tools as shared service layers
- which executables consume which backend groups

Accessibility

- A library map that distinguishes reusable
- backends from application processes.

Validation

- Every library and edge must come from the current CMake targets and link relations.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
