**Purpose**

- Show the current biochemical extension
- surface and its import/export boundary.

**Required content**

- native biochemical definitions
- deterministic network runner
- SBML bridge
- structural runner commands

**Accessibility**

- A block diagram that shows native
- biochemical data flowing into the
- deterministic runner and into the SBML
- bridge.

**Validation**

- The diagram must match the current class names and the command-oriented runner surface in the

The source block remains the authoritative specification.  
The rendered asset is a compact visual summary.
