- source/tests/demo_continuous_trace.cpp

Purpose

- Show the current continuous-solver stack,
- including the legacy contract,

Required content

- legacy solver contract
- ODE system abstraction
- solver factory
- RungeKutta4 and DormandPrince54 concrete solvers
- representative callers in the runtime/tests

Exclusions

- do not imply that the legacy solver path is the preferred modern API
- do not imply a general-purpose symbolic equation engine

Accessibility

- A layered solver map that shows which
- interfaces are legacy and which are

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
