Process / flow

Source

- source/tools/Continuous/DiffusionMethodOfLinesSystem.h
- source/plugins/data/Continuous/DiffusionField.h
- source/plugins/components/Continuous/DiffusionSimulate.h
- source/tests/unit/test_plugins_continuous_diffusion.cpp

Purpose

- Show the PDE -> Method of Lines -> ODE
- solver pipeline and the bridge to

Required content

- PDE definition
- spatial grid / finite-difference discretization
- ODE system assembly
- solver selection
- diffusion field state and diagnostics
- discrete-event component trigger

Exclusions

- do not imply that all PDEs are supported
- do not imply a general user equation compiler

Accessibility

- A pipeline diagram from diffusion equation
- to discrete-event driven solve.

Validation

- The diagram must match the current diffusion unit tests and headers.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
