Process / flow

Source

- models/AirportSecurityExample.gen
- source/applications/modelSpecific/arenaExamples/AirportSecurityExample.cpp
- source/plugins/components/Logic/Create.h
- source/plugins/components/DiscreteProcessing/Process.h
- source/plugins/components/Decisions/Decide.h
- source/plugins/components/Logic/Dispose.h

Purpose

- Show the logical flow of the first
- tutorial model from arrivals to the two
- disposal branches.

Required content

- Create -> Process -> Decide chain
- resource seize point
- queue and branch outcomes
- the single simple change point used later in the chapter

Accessibility

- A compact flow diagram that lets the
- reader map the textual tutorial to the
- model structure.

Validation

- The diagram must match the current checked-in example model and its saved component names.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
