

Baseline simulation running in the GUI.

fig:first-model-execution | figure

Generated from FIGURE-SPEC comments

Source

- source/applications/gui/genesys/mainwindow.cpp
- source/kernel/simulator/model/ModelSimulation.cpp
- models/AirportSecurityExample.gen

Purpose

- Show the GUI while the baseline simulation
- is actively running.

Required content

- active run indicator
- current simulation time or progress
- visible model or trace updates
- controls in a state consistent with execution

Accessibility

- A screenshot that proves the simulation is
- running and not just configured.

Validation

- The running state must correspond to the baseline example described in the text.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
