

Baseline properties for the tutorial model.

fig:first-model-properties | figure

Generated from FIGURE-SPEC comments

Source

- models/AirportSecurityExample.gen
- source/applications/gui/genesys/controllers/PropertyEditorController.cpp
- source/kernel/simulator/model/ModelSimulation.cpp

Purpose

- Show the key object properties and the simulation values that define the baseline
- run.

Required content

- property editor with Create_1 selected
- the arrival expression and time unit
- the process delay and resource request
- the simulation configuration summary

Accessibility

- A close-up of the editable fields that control the tutorial model.

Validation

- The visible properties must match the values stored in AirportSecurityExample.gen.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
