

Simulation configuration for the baseline tutorial run.

fig:first-model-simulation-config | figure

Generated from FIGURE-SPEC comments

Source

- source/applications/gui/genesys/dialogs/dialogsimulationconfigure.cpp
- source/kernel/simulator/model/ModelSimulation.cpp
- models/AirportSecurityExample.gen

Purpose

- Show the simulation dialog used to confirm
- the replication length, warm-up, and
- replication count.

Required content

- number of replications
- replication length
- warm-up period
- time-unit selectors

Accessibility

- The simulation settings that make the
- example run reproducible.

Validation

- The dialog state must reflect the same values stored in the model file.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
