Purpose

- Show the kernel entry point and the
- manager objects owned or reached through
- it.

Required content

- Simulator at the center
- owned manager objects
- Model as a kernel object with its own runtime helpers

Accessibility

- A compact UML-style view that helps the
- reader understand which objects are
- top-level managers and which ones are
- owned by a model.

Validation

- Every class label must exist in the current code and every ownership edge must match the construct

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
