Source

- ../source/kernel/simulator/model/ModelDataDefinition.h
- ../source/kernel/simulator/model/ModelDataDefinition.cpp
- ../source/kernel/simulator/model/ModelComponent.h
- ../source/kernel/simulator/model/ModelComponent.cpp
- ../source/kernel/simulator/model/ModelDataManager.h
- ../source/kernel/simulator/model/ModelComponentManager.h

Purpose

- Show the current inheritance split and the
- two managers that index the shared base
- layer.

Required content

- ModelDataDefinition as the shared runtime base
- ModelComponent inheriting from ModelDataDefinition
- ModelDataManager owning the registry of all definitions
- ModelComponentManager owning the registry of components only

Accessibility

- A class diagram that lets the reader see
- that components are a specialization of
- model data definitions rather than a
- disjoint hierarchy.

Validation

- Every class name and registry edge must match the current headers and constructor/destructor path

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
