Process / flow

Source

- ../source/kernel/simulator/persistence/PersistenceDefaultImpl2.cpp
- ../source/kernel/simulator/persistence/GenSerializer.cpp
- ../source/kernel/simulator/model/ModelDataDefinition.h
- ../source/kernel/simulator/model/ModelDataDefinition.cpp
- ../source/kernel/simulator/model/ModelComponent.h
- ../source/kernel/simulator/model/ModelComponent.cpp

Purpose

- Show the save and load round-trip for the
- shared base class and the component
- specialization.

Required content

- ModelDataDefinition::SaveInstance and ::LoadInstance
- ModelComponent::SaveInstance and ::LoadInstance
- the shared metadata fields
- the component connection fields
- deferred reconnection after load

Accessibility

- A pipeline diagram that makes the order of
- serialization, instantiation, and
- reconnection easy to audit.

Validation

- The diagram must reflect the current field names and the deferred-connection behavior in the code.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
