

Model validation feedback after a check.

fig:model-editing-validation-message | figure

Generated from FIGURE-SPEC comments

Source

- source/applications/gui/genesys/mainwindow.cpp
- source/applications/gui/genesys/controllers/ModelLifecycleController.cpp
- source/kernel/simulator/model/Model.cpp

Purpose

- Show the model validation result after the
- invalid property is checked.

Required content

- the validation dialog or console message
- the model check action in context
- the error text or success/failure indication

Accessibility

- A visual proof that the GUI reports
- validation results to the user.

Validation

- The message must correspond to the model's current check result, not a previous run.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
