- source/applications/gui/genesys/mainwindow.cpp

Purpose

- Show the practical editing loop from
- loading a model to selecting elements and
- changing properties.

Required content

- the loaded model canvas
- the component tree or palette used to reach components
- the property editor bound to a selected component
- a visible indication that the model is in an editable state

Accessibility

- A workspace screenshot that proves the GUI
- is ready for model editing.

Validation

- The screen must correspond to the checked-in model or its saved working copy and not to an unrela

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
