Tree / family map

Banking transactions...

ATM, teller,...

...

the saved .gen...

the 8 hour / 3...

Source

- source/applications/modelSpecific/arenaExamples/Banking_Transactions.cpp
- models/Banking_Transactions.gen
- build/modelspecific-validation/logs/arenaExamples__Banking_Transactions.run.log

Purpose

- Show the multi-branch banking workflow and
- the generated model output.

Required content

- ATM, teller, and drive-thru branches
- station/route/seize/release chains
- the saved .gen output artifact
- the 8 hour / 3 replication configuration

Accessibility

- A multi-lane banking workflow diagram
- showing that the same executable can build
- a richer example.

Validation

- The structure must match the source file and the current reproduced run log.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
