

Current Debian package build and validation pipeline.

fig:packaging-debian-pipeline | figure

Generated from FIGURE-SPEC comments

Process / flow

Source

- ../github/workflows/genesys-debian-package.yml
- ../debian/rules
- ../debian/control
- ../packaging/linux/io.github.rlcancian.genesys.metainfo.xml

Purpose

- Show the current Debian package build
- pipeline from checkout to package

Required content

- workflow_dispatch and path-triggered entry
- dpkg-buildpackage
- AppStream validation
- lintian
- package verification

Accessibility

- A left-to-right pipeline that shows how
- source checkout becomes package

Validation

- The commands and filenames must match the current workflow and packaging
- files.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
