Source

- ../source/applications/modelSpecific/wcm/WcmPathwayStressWholeCellMvp.h
- ../source/plugins/components/WholeCellModeling/PathwayStressResponseComponent.h
- ../source/plugins/components/WholeCellModeling/CellFateDecisionComponent.h

Purpose

- Show the sustained low-pathway-stress path
- from objective to arrest/death routing.

Required content

- monitored pathway objective
- threshold
- stress streak
- arrest/death routing

Accessibility

- A simple lifecycle diagram where low
- objective activity produces arrest and
- death paths.

Validation

- The diagram must match the current stress component inputs and routing behavior.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
