

Current configure, build, test, and support workflow.

fig:repo-build-flow | figure

Generated from FIGURE-SPEC comments

Process / flow

Source

- ../CMakePresets.json
- ../README.md
- ../docs/ai_assistants/runbooks/LOCAL_AGENT.md
- ../docs/developers/ManualGenESyS_source/make.sh

Purpose

- Show the current configure -> build ->
- test flow and where packaging/doc
- generation sits relative to it.

Required content

- preset selection
- configure step
- build step
- test step
- packaging/documentation side paths

Accessibility

- A flow diagram that explains how a
- developer moves from preset selection to a
- validated target.

Validation

- The steps and preset names must match the current preset inventory and the documented runbooks

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
