

# Shell session after loading a model file.

fig:shell-model-loaded | figure

Generated from FIGURE-SPEC comments

**Source**

- source/applications/shell/GenesysShell.cpp
- models/AirportSecurityExample.gen
- source/kernel/simulator/SimulatorFacade.h

**Purpose**

- Show the shell after a real model has been loaded and inspected.

**Required content**

- the model load command
- a confirmation that the model loaded
- a follow-up inspection command such as model show, model check, or sim show

**Accessibility**

- A terminal screenshot that proves the shell can move from startup to a loaded model.

**Validation**

- The observed model path and output must match a repository model file.

The source block remains the authoritative specification. The rendered asset is a compact visual summary.
