Source

- ../README.md
- ../docs/ai_assistants/STATUS.md
- ../docs/ai_assistants/runbooks/LOCAL_AGENT.md
- ../source/applications/gui/genesys/main.cpp
- ../source/applications/gui/genesys/controllers/ModelLifecycleController.cpp
- ../source/applications/shell/GenesysShell.cpp

Purpose

- Show a conservative decision tree that
- routes the reader from symptom class to
- the current diagnostic surface.

Required content

- build/configure branch
- startup/display branch
- model open/check branch
- parser branch
- plugin branch
- worker/helper-tool branch

Accessibility

- A top-down flowchart that helps the reader
- pick the next diagnostic step without
- guessing.

Validation

- The branches must reflect the current code and documentation boundaries rather than future support.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
