

# Current log and reporting locations.

fig:troubleshooting-log-locations | figure

Generated from FIGURE-SPEC comments

**Source**

- ../source/applications/gui/genesys/main.cpp
- ../source/applications/gui/genesys/controllers/DialogUtilityController.cpp
- ../source/applications/gui/genesys/dialogs/DialogReportIssue.cpp

**Purpose**

- Show where the current GUI writes its
- process log and what the issue-report path
- can attach.

**Required content**

- the working-directory log file
- the About/Report Issue entry point
- the attach-log-tail option
- the console/simulation/reports panes

**Accessibility**

- A compact diagram that points to the
- current diagnostic evidence locations.

**Validation**

- The location and attachments must match the current GUI startup and reporting code.

The source block remains the authoritative specification.  
The rendered asset is a compact visual summary.
